

Network Map

High quality network

We run our own network that interconnects a growing number of data centers across Europe. Customers using a VPN connection between their subsidiaries will profit from short paths and low latencies. We rely only on renowned partners running the data centres such as InterXion, TeleCity or RedBus, high quality TIER-1 transit providers such as Level3, Tiscali, KPN Abovenet and a number of private peerings to make our network fully redundant.

European Coverage

- Our services are available in this country
- Rollout for this country is planned

Leased Lines

Availability of our DSL-Business products depends on the distance from your location to the phone central. If we can not meet your bandwidth requirements a leased line service can be an alternative.

Ask us for a quote

The pricing for a leased line service is individually calculated based on the distance of your location from our nearest POP. Other than with aDSL or sDSL services there are no length restrictions for 2 Mbit/s leased lines, thus making this product available nationwide in any location. On short distances from our POPs we can also provide a 10 Mbit/s service, in metro areas where fibre connections are available we can provide 100 Mbit/s or even 1 Gbit/s services.

Our offers are valid only for registered businesses. All prices excluding VAT. Errors and omissions excepted. Subject to our general terms and conditions.
